Software Engineer | Mobile Application Developer

Software Engineer with 1.5+ years of professional experience designing and building production-grade applications. Experienced in Flutter, Dart, REST APIs, offline-first architectures, state management (BLoC/Riverpod), and scalable software development. Passionate about solving complex engineering problems, writing clean and maintainable code, root-cause debugging and collaborating in Agile teams to deliver high-quality software.

TECHNICAL SKILLS

Languages: Dart, Python (FastAPI), JavaScript, SQL

Core CS: Data Structures & Algorithms, Object-Oriented Programming (OOP), System Design fundamentals

Backend Development & Distributed Systems: REST API Integration, FastAPI, Node.js(in progress), Express.js (in progress), client-server data synchronization

Mobile Development: Flutter, Android, iOS, Cross-Platform Development, Clean Architecture

State Management: BLoC, Provider, Riverpod, GetX

Data & Storage: Hive, SQLite, SharedPreferences, JSON

Testing & Quality: Unit/Functional testing, Postman, Debugging, Performance Optimization

Tools & Practices: Git, GitHub, Firebase, Agile/Scrum, SDLC, Code Reviews, Scalable Architecture

PROFESSIONAL EXPERIENCE

Associate Software Engineer at Resolute AI Workspace

Jul 2025 - Current

- Designed and built a scalable architecture (Flutter, Dart) for an enterprise application deployed across large-scale clients (GMR Group, Olam Agri), covering secure authentication, role-based access control, and high system reliability.
- Integrated and consumed REST APIs for real-time data exchange, and built an offline-first synchronization layer (Hive, SQLite) ensuring data consistency between local storage and backend services under intermittent network conditions.
- Performed unit and integration testing alongside performance optimization and root-cause analysis on production issues, reducing recurring incidents and improving application load times and stability.
- Collaborated with backend engineers, QA, and project managers in an Agile environment to scope requirements, review code, and ship reliable, well-tested features to production on a weekly cadence.

Flutter Developer Intern at Destek InfoSolutions Pvt. LTD

Nov 2024 - Apr 2025

- Shipped 10+ production features across two applications (TSHA Connect, LeadZilla), integrating REST APIs, JSON parsing, and the Easebuzz payment gateway.
- Wrote test cases and performed manual/functional testing during iterative delivery cycles, incorporating code review feedback to improve code quality and application stability.
- Partnered with product and sales teams to translate business requirements into reliable, testable software, contributing to performance improvements across key user flows.

PROJECTS

Taskopia - Real Time Event Tracking and Control

- Architected a scalable, offline-first mobile application using Flutter, Riverpod, SQLite, and RESTful APIs, featuring real-time synchronization, modular clean architecture, and reliable performance under concurrent updates.
- Designed a solution for efficient event monitoring and faster decision-making by distributed teams; the project was published as a peer-reviewed research paper (Impact Factor: 7.97, April 2024).

MovieMate - Movie Browsing & Discovery Application

- Built a cross-platform app consuming third-party REST APIs, with SQLite local caching and performance optimization for fast, offline-capable browsing.

TripNest - Travel Planning & Exploration App

- Built a cross-platform trip-planning app with a scalable, modular architecture, REST API-driven itinerary generation, Google Maps integration, and a responsive, performance-optimized UI.

EDUCATION

Bachelor in Computer Engineering

Sinhgad Academy of Engineering, Pune

Jul 2020 - May 2024

Class XII

Dinanth Junior College, Nagpur

Jun 2019 - Mar 2020
